

RIVER OF MUD

THE WORST ENVIRONMENTAL DISASTER IN BRAZIL

The virtual reality movie by the Brazilian film director Tadeu Jungle portrays delicately and melancholically the survivors of Brazil's greatest environmental disaster.

SYNOPSIS

It is a short VR documentary about the worst environmental disaster in Brazil: the Samarco's dam failure. Sixty million cubic meters of toxic brown mudflows reached the Atlantic Ocean 17 days later, killing 19 people. The total impact and environmental consequences to the river and the beaches near its mouth, or to the wildlife are still unclear. The documentary shows what is left of the Bento Rodrigues village, contrasting the devastated landscape with the happy memories of its inhabitants.
